## LIFE CLINOMICS

### WHY?

**Adapting to climate change** means accepting that climate change is already a reality and that changes are needed to minimize its impact. In fact, it can even be an opportunity to do things better, to build more sustainable and resilient territories and societies

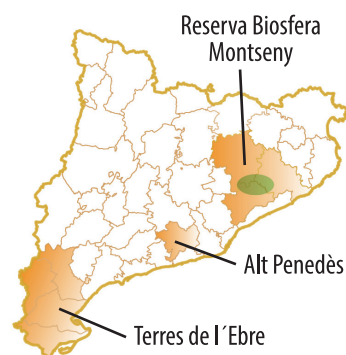

### HOW?

**Life Clinomics** project proposes to launch new investment processes of public entities, especially municipalities, as well as private companies of certain representative sectors, in order to reduce their vulnerability, so that they can anticipate climatic impacts and increase their resilience, improving competitiveness and increasing employment.

### WHERE?

**In three territories** with representative ecosystems: the region of Alt Penedès, the Montseny Biosphere Reserve and the Terres de l'Ebre Biosphere Reserve.

**In three specific economic sectors** linked to the natural environment and with significant vulnerabilities and opportunities in the face of climate change: fishing, agroforestry and tourism.

## ACTIONS

**CLINOMICS** actions focus on increasing, together with local stakeholders, the resilience of local Mediterranean entities by taking action in the three territories and economic sectors selected.

### Enhancing adaptation to climate change (CC) in 3 territories and 3 sectors

Studies on adaptation to CC and to identify stakeholders involved

### Including adaptation to CC in local administrations

Empowering and training  
Leading adaptation actions

## BUILDING RESILIENCE

### Involving local stakeholders

Empowering and training  
CC adaptation boards  
Strategies and action plans

### Local action on CC adaptation with public-private partnerships

Action plans  
Implementing specific actions
